AUGUST 2007

INTASTOP LAUNCH NEW PRODUCTS AT IHEEM

Widely used in both private and public sector organisations, Intastop products help to provide essential safety, protection and security measures whilst helping to reduce repetitive maintenance costs. In addition, many products are intended for retrofit projects, enabling building protection, performance and functionality to be updated without significant investment or interruption to their normal usage.

Intastop offers a range of innovative and cost-effective products that increase protection and reduce maintenance bills including Door Protection, Anti Ligature Products, Wall Protection and Access, Seals & Acoustic products.

One of these innovative solutions includes the new double swing hinge, ideal for use in corridor situations or for doors that need to swing both ways. An alternative to the problems often associated with pivots and repetitive maintenance. A continuous geared double swing hinge with exactly the same benefits that people expect from a normal Intastop continuous hinge but double swing.

Privacy is rightly seen as a basic human right, but can also be a potential danger to both persons and property, especially in detention centres, mental health units, hospitals, immigration centres, care centres and anywhere there is a risk of persons harming themselves. One of the most severe risks comes from ligature.

Intastop will be launching new technological products to overcome these problems. The new anti ligature censored hinge will mean no more chopping doors at an angle to prevent the ligature point at the top of the door. A weighted sensor that cannot be seen at the top of the door will send a buzzer to the pager to inform an attempt; failsafe batteries are also part of this unique product for total 100% confidence.

All this and more will be on show at the recent Healthcare Estates show on Stand C25.
