Primary School Wall Corner Protection

Product Used

Soft Touch PVC Corner Guard

Client

Bawtry Mayflower Primary School,
Yorkshire

Market Sector

Education

What the client says

"The corner protection from Intastop has provided both an aesthetically pleasing and infinitely practical solution to the ongoing maintenance of the school. Due to the range of colours, we have been able to co-ordinate the protection with our existing decor and we are delighted with both the visual finish and the practicalities that it will offer us. It was easy to install and will ensure that our school remains safe, clean and well maintained for our pupils, staff and visitors."

The Project Brief

Bawtry Mayflower Primary School was experiencing a considerable amount of damage to the corners of its interior walls from everyday wear and tear. It therefore needed to find an effective way of protecting both pupils and the fabric of its building whilst retaining much of its existing colour scheme and minimising the need for ongoing maintenance work.

The Solution

Intastop's Soft Touch PVC Corner Guard was selected for the project as it offered durable protection to exposed corners, was quick and easy to install and would minimise the need for expensive and frequent repairs. This is all made possible by a unique manufacturing process that ensures the anti-bacterial additive penetrates the entire product rather than just the outer layer, to leave a tough, long lasting finish.

But as tough as it is, the corner guard is softer to touch when compared to the harshness of exposed plaster or wooden corners, which is especially reassuring to know in areas where small or vulnerable people come into contact with it.

The Benefits

- Anti-bacterial additive penetrates the product
- Tough, long lasting finish
- Softer than exposed wood and plaster
- Available in a range of lengths and colours
- Quick and easy installation with Intastop special adhesive or screws
- No risk of cracking on impact
